Foreword

I would like to extend to all of you a very warm welcome to Palmerston North for the 2003 Image and Vision Computing New Zealand Conference. The conference this year has grown somewhat from previous years, now taking three full days of presentations. Although the original intention was to keep the programme of oral presentations to a single stream, the large number of submissions has resulted in splitting one afternoon into two streams. A significant number of posters have also been submitted to this year's conference, and we have scheduled two sessions of poster presentations, and their corresponding "barking sessions". This approach has worked well in past IVCNZs, and allows the presenters an opportunity to attract delegates to their poster, and delegates an opportunity to readily identify the particular posters that may be of more interest to them.

We have endeavoured to keep the registration costs as low as possible, particularly for student delegates. This has been achieved by keeping things simple, and maintaining a relatively low key conference. As a result, we have attracted a good number of both papers, and delegates, particularly from overseas. At the time of publication, just under half of the papers submitted were from outside New Zealand, with several coming from Europe. Of the delegates attending the conference, about 40% are students.

Within our programme this year, we have two keynote addresses. The first is from Professor Bob Hodgson, from Massey University, who is providing some of his perspectives on image processing, particularly from an applications context within New Zealand. We have placed his paper at the start of the conference, to set the scene for many of the other applications that everyone else is working on. The second keynote presentation is by Professor Jake Aggarwal, who is joining us from Austin, Texas. His address presents his latest research into content-based image retrieval. We are grateful to both speakers for their participation in this year's conference.

I would like to take this opportunity to thank the other members of the organising committee: Christine Allport, Amal Punchihewa, Roger Browne, Kim Gribbon, and Andrew Gilman. Their efforts have greatly assisted the bringing together of the various organisational details of this year's conference. I would also like to thank Michael Wilson for his technical assistance with the web reviewing procedures, and with the final formatting of the papers for the proceedings. The quality of the conference is maintained by the paper reviewers, who have volunteered their time to examine and critique all of the papers in the programme. Each paper has been reviewed by two, and in many cases three, reviewers to ensure that each paper is up to the expected standard. Many thanks also to the sponsors of this year's conference: the Institute of Information Sciences and Technology at Massey University, the International Association for Pattern Recognition, Applied Research Associates New Zealand Ltd, and Hoare Research Ltd.

Finally, I hope that you enjoy the varied programme that we have, and find the discussion with like minds to be stimulating. Make the most of the opportunities presented to forge new collaborations with the other delegates. While in Palmerston North, take the opportunity to sample what the Manawatu has to offer, and after it is all over, I wish you a safe journey back home.

Donald Bailey IVCNZ'03 Convenor.

Table of Contents

Wednesday 26 November

Session 1: Opening (9:15 am – 10:15 am)

	Keynote Address:	
	The Past, Present & Future of Image Processing Systems Engineering	
Se	ssion 2: Applications (10:40 am – 12:20 pm)	
	3D Pose Estimation of Beef Carcasses using Symmetry	
	Background Correction in Forensic Photography Gordon M. Miskelly, John H. Wagner	13
	Defect Analysis of Grit-blasted or Spray-painted Surface Using Vision Sensing Techniques	18
	Towards a Human Tracking System for a Mobile Robot Using Neural-Based Motion Detectors <i>John A. Perrone, Tony Voyle, Margaret E. Jefferies</i>	24
	Active Contours and Logarithmic Hue-like Colour Space Applied to Lip Tracking	29
Se	ession 3: Image Retrieval (1:30 pm – 3:00 pm)	
	Keynote Address:	
	Content-based Image Retrieval in Digital Image Databases using Structure, Color and Texture J.K. Aggarwal	35
	A General Framework for Image Retrieval using Reinforced Learning	30
	Image Retrieval Using Colour Co-occurrence Histograms	42
Se	ession 4: Remote Sensing (3:20 pm – 5:00 pm)	
	Vehicle Detection from Airborne Images by Separation of Texture Propertied and their Fusion Hartwig Hetzheim, Anko Börner	48
	A Description of New Zealand Forest using Full-polarisation Radar Imagery	54
	Detecting Buildings and Roof Segments by Combining LIDAR Data and Multispectral Images Franz Rottensteiner, John Trinder, Simon Clode, Kurt Kubik	60
	The Effects of Multipath on Bathymetric Synthetic Aperture Sonar using Belief Propagation	60
	Panoramic Mapping using CCD-Line Camera and Laser Scanner with Integrated Position and Orientation System	72

Thursday 27 November

Session 5: Poster I (9:00 am – 10:15 am)

	A Traffic Object Detection System for Road Traffic Measurement and Management	78
	Interactive Modelling of Hair with Texture Maps	84
	An Efficient and Topological Correct Polygonisation Algorithm for Finite Element Data Sets	90
	Biquadratic Interpolation of Intensity for Fast Shading of Three Dimensional Objects	96
	A Novel Image Retrieval Based on Representative Colors	102
	Multigrid Analysis of Curvature Estimators Simon Hermann, Reinhard Klette	108
	Use of Multiple Surface Normal Approximations in the Shape-from-Shading Using Jacobi's Iterative Method	113
	Acoustic Timing Simulation of Active Beacons for Measuring the Tow-Path of a Synthetic Aperture Sonar	119
	3D Articulated Structure and Motion Analysis from Monocular Images	125
	Laser-Based Finger Tracking System Suitable for MOEMS Integration	131
	Fast Algorithm for VQ-based Wavelet Coding System	137
	Reconstruction Formulas for Rotational Dynamic Stereo	142
	Scaling and Power Spectra od Natural Images	148
	Feature Points Extraction from Faces Hua Gu, Guangda Su, Cheng Du	154
	Player Segmentation Evaluation for Trajectory Estimation in Soccer Games	159
	Spatial and Temporal Segmentation of Continuous Human Motion from Monocular Video Images . Richard D. Green	163
	Extraction of Shape of an Object and Construction of Closed Curves using Image Information Junko Fukuda	169
Ses	sion 6: Phase (10:40 am – 11:40 am)	
	Effects of Spectral Amplitude and Phase Errors on Interpretability of Images	175
	Estimating Phase Aberrations from Intensity Data Theam Yong Chew, Richard G. Lane	181
	Comparison of Wavefront Sensing using Subdivision at the Aperture and Focal Planes	187

	ntra Frame Relay in ECC Video	193
U E	Using Autoregressive Truncated Singular Value Decomposition Algorithm for Obtaining More Efficiently Compressed Images	199
В	A New Image Copyright Protection Algorithm Using Digital Signature of Trading Message and Bar Code Watermark	205
C	tereo Image Compression by Quadrant Vector Quantization	210
	Vatermarking Still Images Using Parameterized Wavelet Systems	215
Sessi	on 7B: Biometrics (1:20 pm – 3:00 pm)	
	Accurately Measuring the Size of the Pupil of the Eye	221
	almprint Recognition with PCA and ICA	227
	An AFIS Using Fingerprint Classification	233
	On Training Cascade Face Detectors	239
Sessi	on 8A: Stereo Imaging (3:40 pm – 5:00 pm)	
P	nvestigation of Directional Filter on Kube-Pentland's 3D Surface Reflectance Model using Photometric Stereo	245
3	D Reconstruction Using Shape from Photometric Stereo and Contours	251
	Dense Stereo Correspondence Based on Recursive Adaptive Size Multi-Windowing	256
	tereo Disparity Estimation in Moment Space	260
Sessi	on 8B: Biomedical Applications (3:40 pm – 5:00 pm)	
	Cemplate-Driven 3D Segmentation for Biomedical Images in Confocal Microscopy	265
	Automated Particle Picking of Biological Molecules Images by Electron Microscopy	269
	Soward a Mobility Aid for the Blind	275

Friday 28 November

Session 9: Poster II (9:00 am – 10:15 am)

	Microaneurysm Detection in Colour Fundus Images	280
	Reinventing the Microscope in the Age of Digital Imaging	285
	Obtaining Three-dimensional Information From Forests using Polarimetric Interferometry	291
	Animation of Tree Development	297
	Modelling of Turbulent Water over Natural Terrain	303
	Automated Feature Extraction for Object Recognition	309
	Optimal Wavelets and Neural Networks for Pattern Recognition	314
	Human Activity Recognition by Head Movement using Elman Network and Neuro-Markovian Hybrids	320
	A Survey of Coded Image and Video Quality Assessment	326
	A Study on the Image Based 3D Modeling by Weighted Bi-directional Registration	332
	Accuracy Improvement in Camera Calibration	338
	Combination of PCA and Wavelet Transforms for Face Recognition on 2.5D Images	343
	Robust Tracking Algorithm of Multiple Objects Under Dynamic Environment	348
	Vision System for a Trax Robot	354
	Refinement to the Chamfer Matching for a "Centre-on" Fit	360
Ses	sion 10: Graphics (10:40 am – 12:20 pm)	
	Filmmaking Production System with Rule-based Reasoning	366
	Authoring and Visualizing Stereo Panoramic Images with Independent Objects	372
	Efficient Collision Detection for Skeletally Animated Models in Interactive Environments	378
	A Strategy for 3D Face Analysis and Synthesis	384
	Fast Texture Mapping of Photographs on a 3D Facial Model	390

Session 11: Techniques (1:20 pm – 3:00 pm)

	More Active Shape Model	396
	Soren Klim, Stig Mortensen, Bjarni Bodvarsson, Lars Hyldstrup, Hans Henrik Thodberg	
	Classification Strategies for Image Classification in Genetic Programming	402
	A Real-time FPGA Implementation of a Barrel Distortion Correction Algorithm with Bilinear Interpolation	408
	Sub-pixel Estimation of Local Extrema	414
	Scene Reconstruction by Greedy Belief Propagation	420
Ind	exes	
	Author index	426
	Author index	
	Keyword index	428
